DETAILED ACTION

Priority

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Specification

2. Applicant is reminded of the proper language and format for an abstract of the disclosure.

The abstract should be in narrative form and generally limited to a single paragraph on a separate sheet within the range of 50 to 150 words. It is important that the abstract not exceed 150 words in length since the space provided for the abstract on the computer tape used by the printer is limited. The form and legal phraseology often used in patent claims, such as "means" and "said," should be avoided. The abstract should describe the disclosure sufficiently to assist readers in deciding whether there is a need for consulting the full patent text for details.

The language should be clear and concise and should not repeat information given in the title. It should avoid using phrases which can be implied, such as, "The disclosure concerns," "The disclosure defined by this invention," "The disclosure describes," etc.

The following guidelines illustrate the preferred layout for the specification of a utility application. These guidelines are suggested for the applicant's use.

Arrangement of the Specification

As provided in 37 CFR 1.77(b), the specification of a utility application should include the following sections in order. Each of the lettered items should appear in upper case, without underlining or bold type, as a section heading. If no text follows the section heading, the phrase "Not Applicable" should follow the section heading:

- (a) TITLE OF THE INVENTION.
- (b) CROSS-REFERENCE TO RELATED APPLICATIONS.
- (c) STATEMENT REGARDING FEDERALLY SPONSORED RESEARCH OR DEVELOPMENT.
- (d) THE NAMES OF THE PARTIES TO A JOINT RESEARCH AGREEMENT.
- (e) INCORPORATION-BY-REFERENCE OF MATERIAL SUBMITTED ON A COMPACT DISC.
- (f) BACKGROUND OF THE INVENTION.

Art Unit: 2821

(1) Field of the Invention.

- (2) Description of Related Art including information disclosed under 37 CFR 1.97 and 1.98.
- (g) BRIEF SUMMARY OF THE INVENTION.
- (h) BRIEF DESCRIPTION OF THE SEVERAL VIEWS OF THE DRAWING(S).
- (i) DETAILED DESCRIPTION OF THE INVENTION.
- (j) CLAIM OR CLAIMS (commencing on a separate sheet).
- (k) ABSTRACT OF THE DISCLOSURE (commencing on a separate sheet).
- (I) SEQUENCE LISTING (See MPEP § 2424 and 37 CFR 1.821-1.825. A "Sequence Listing" is required on paper if the application discloses a nucleotide or amino acid sequence as defined in 37 CFR 1.821(a) and if the required "Sequence Listing" is not submitted as an electronic document on compact disc).

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 4. Claims 1-10 are rejected under 35 U.S.C. 102(b) as being anticipated by Tarvas et al. (EP 1304765 A2).

Regarding claim 1, Tarvas et al. teaches in figures 2-8 an antenna arrangement (200) comprising a substantially planar patch conductor (220) having a first feed connection point (F) for connection to radio circuitry and a second feed connection point (S) for connection to a ground plane (GND), a first, differential slot (232) in the patch conductor between the first and second connection points and a second, dual band slot (231) located in the patch conductor outside the area between the first and second connection points, wherein the length of the first slot is such as to provide an additional resonance.

Art Unit: 2821

Regarding claim 2, Tarvas et al. teaches in figures 2-8 an antenna arrangement as claimed in claim 1, characterised in that the length of the first slot (232) is greater than a quarter wavelength (See Abstract).

Regarding claim 3, Tarvas et al. teaches in figures 2-8 an antenna arrangement as claimed in claim 1, characterised in that the length of the first slot (232) is such that the additional resonance combines with an adjacent resonance.

Regarding claim 4, Tarvas et al. teaches in figures 2-8 an antenna arrangement as claimed in claim 1, characterised in that the width of the patch conductor (220) between the first and the second slots (232, 231) is selected to obtain a predetermined impedance transformation.

Regarding claim 5, Tarvas et al. teaches in figures 2-8 an antenna arrangement as claimed in claim 4, characterised in that the width of the patch conductor (220) between the first and the second slots (232, 231) is selected to give an impedance less then a system impedance.

Regarding claim 6, Tarvas et al. teaches in figures 2-8 a module comprising a printed circuit board (PCB) (GND) providing a ground plane, radio circuitry mounted on the PCB, and an antenna arrangement (200), the antenna arrangement comprising a substantially planar patch conductor (220) having a first feed connection point (F) for connection to the radio circuitry and a second feed connection point (S) for connection to the ground plane, a first, differential slot (232) in the patch conductor between the first and second connection points and a second, dual band slot (231) located in the patch

Art Unit: 2821

conductor outside the area between the first and second connection points, wherein the length of the first slot (232) is such as to provide an additional resonance.

Regarding claim 7, Tarvas et al. teaches in figures 2-8 a module as claimed in claim 6, characterised in that the length of the first slot (232) is greater than a quarter wavelength (See Abstract).

Regarding claim 8, Tarvas et al. teaches in figures 2-8 a module as claimed in claim 6, characterised in that the length of the first slot (232) is such that the additional resonance combines with an adjacent resonance.

Regarding claim 9, Tarvas et al. teaches in figures 2-8 a module as claimed in claim 6, characterised in that the width of the patch conductor (220) between the first and the second slots is selected to obtain a predetermined impedance transformation.

Regarding claim 10, Tarvas et al. teaches in figures 2-8a radio communications apparatus comprising a casing (MS) containing a printed circuit board (PCB) (GND) providing a ground plane, radio circuitry mounted on the PCB, and an antenna arrangement (200), the antenna arrangement comprising a substantially planar patch conductor(220) having a first feed connection point (F) for connection to the radio circuitry and a second feed connection point (S) for connection to the ground plane, a first, differential slot (232) in the patch conductor between the first and second connection points and a second, dual band slot (231) located in the patch conductor outside the area between the first and second connection points, wherein the length of the first slot (232) is such as to provide an additional resonance.

Correspondence

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Shih-Chao Chen whose telephone number is (571) 272-1819. The examiner can normally be reached on Monday-Thursday from 7 AM to 5:30 PM, Fri. off.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Douglas W. Owens can be reached on (571) 272-1662. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
